1. The factory inspection/reliability test is required to be carried out at a site having adequate power and, dust free environment at least for minimum **72** 'UPS units along with Batteries' per day. The vendor should make suitable arrangements to provide Uninterrupted (UPS) power for the inspection set-up.
2. It is suggested that the vendor should make appropriate arrangement to place the equipment offered for inspection/reliability test on suitable racks/tables, considering easy and hassle-free access to keyboard/monitor of all the equipment.
3. The vendor should ensure availability of trained technical/support staff at the inspection site for efficient handling of the inspection and movement of the equipment during the inspection.
4. It is suggested that adequate number of extra machines are offered for the inspection and kept for reliability testing. This may be useful in the event of some machines failing during the reliability tests.
5. All the UPS units and its sub-components must bear relevant original manufacturer's part numbers.
6. It is required that a list containing serial numbers of all the UPS units offered for inspection is kept ready before the arrival of the inspection team. The list should preferably be typed. The list should also contain (in tabular fashion) the serial numbers of UPS unit. The serial numbers must be sorted according to the rack/table positions of the equipment.
7. For all the UPS units, the screws for the top cover should be removed **without removing** the cover itself. This is required, as each and every machine will be physically inspected for conformance to the specifications as given in the purchase order.
8. In case of serious discrepancy found in the hardware vis-à-vis the ordered hardware, the inspection will be called off.
9. All the machines must be kept in power-on condition for at least for 24 hours before the arrival of the inspection team at the site.
10. During the power-on condition as mentioned above and during the visit of the inspection team, all the machines should be running latest versions of AMIDIAG diagnostics in an endless loop. If the vendor desires to run any other diagnostic software than the ones mentioned herein, a prior approval of Bank/Consultants is necessary. While obtaining such approval, the vendor must submit to the bank, the detailed description and functionality of the proposed diagnostic software.
11. It must be ensured that every piece of hardware ordered is included in the reliability test, e.g., Isolation transformer, Convertor, Invertor, IGBT board etc.
12. Under no circumstances the diagnostic/reliability test on any/all machines should be stopped or interrupted before the arrival of the inspection team.
13. The inspection team will reject machines, which fail to pass the reliability test.
14. At least one set of all the software items (including media and documentation) ordered should be available at the time of inspection.
15. At least one copy (soft copy) of all the documentation to be supplied to the Bank should be available for the inspection.
16. If the order is cleared in parts or the consignment is rejected by the inspection team, the cost of the subsequent inspection will be borne by the vendor.
